

For Violin Plot ('exercise' dataset)

During **resting time** of **no fat people** ,the median of pulse is increasing from 1min to 30min and density of people also in increasing rate from 1min to 30 min.

For **low fat** people **restime** pulse rate first increase from 1min to 15 min ,then decreases somewhat when at 30min.Density of people from restime increasing at steady rate

While **at walking** ,the same pulse rate but with increased rate with restime period from time 1min to 30 min.density also increases with walking time pulse rate.**low fat & no fatpeople** with 120pulse

While **running** ,steady increasing pulse rate **for no fat people** is from 110 pulse to 150 then to 160 pulse

For **low fat people** pulse rate increases from 110 pulse to 150 then decreases to 130 pulse during **running**
